Narodowy Bank Polski Workshop

Evaluation and Analysis of the Value of German Real Estate Following the Financial Crisis of 2007¹

SPEAKER: DR. CHONG DAE KIM

LOCATION: ZALESIE GÓRNE

DATE: 5. - 6. DECEMBER 2019

1: authors of the paper: Dr. Volker Arhelger (Ergo Group AG) and Dr. C. D. Kim (TH Köln)

Date: 11.12.2019

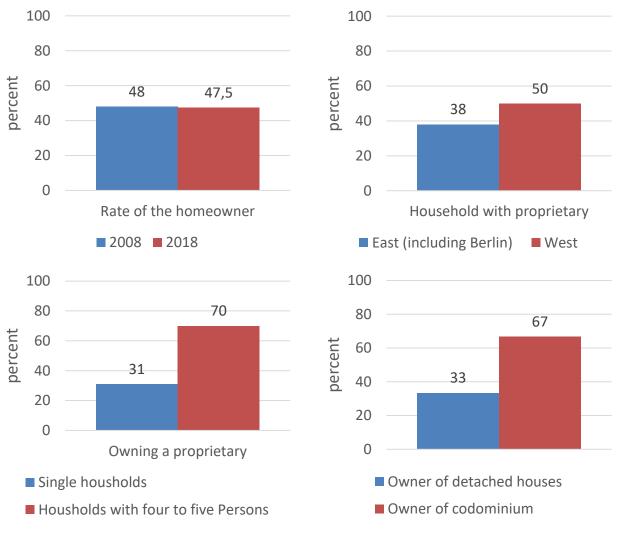

Motivation >> Research Goal >> Evaluation >> Conclusion/Outloo

Structure of the presentation

- 1. Motivation
- Research Goal
- 3. Evaluation of rating factors and interest rate
- 4. Conclusion

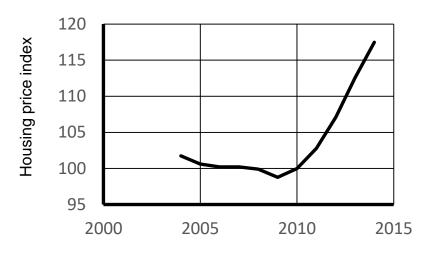

Date: 11.12.2019

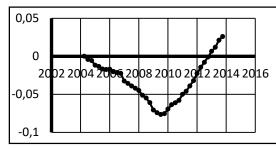

According to the Data of the federal Statistical Office

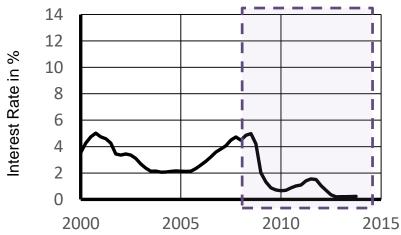

Technology Arts Sciences TH Köln

Nominal housing prices have risen sharply since mid-2009.

The change is more pronounced with real prices.

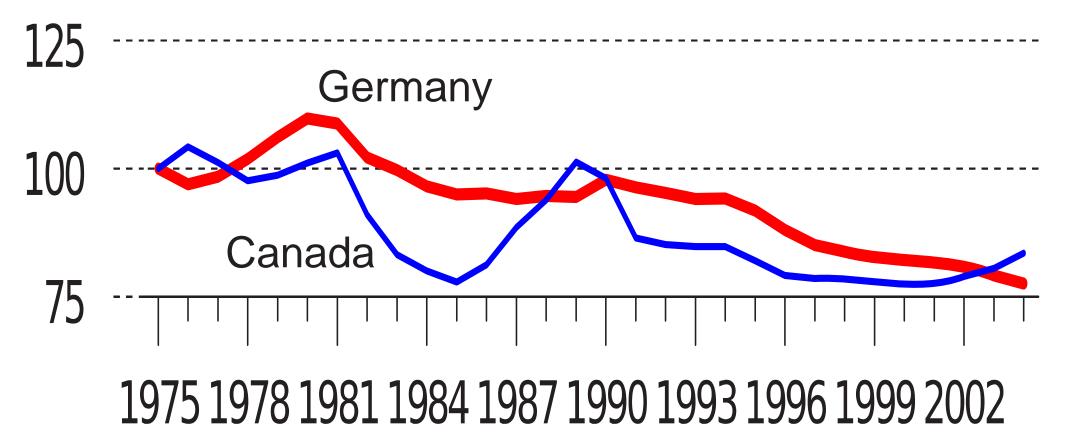

ECB interest rates have fallen strongly after 2007, reaching a (temporary) lowest point in mid-2009.

Speaker: Dr. C. D. Kim

Motivation Research Goal Evaluation Conclusion/Outlook

2. Research Goal

- Applying the partial solution approach to the German housing market
- II. Analyzing certain characteristics of the housing market
- III. Showing the relationship of these characteristics to the interest rate

Date: 11.12.2019

Motivation Research Goal Evaluation Conclusion/Outlook

3. Evaluation of rating factors and interest rate

- Long-term and short-term analysis of select characteristics
- Long-term (10 years)
 - Location
 - Housing type
 - Districts and East-West comparison
- Short-term (3 years)
 - Housing type
 - Condition of the building

Date: 11.12.2019 Slide: 10 Technology Arts Sciences TH Köln **Evaluation**

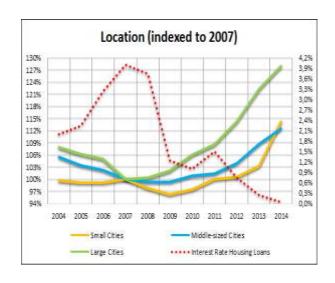

3.1 Long-term location

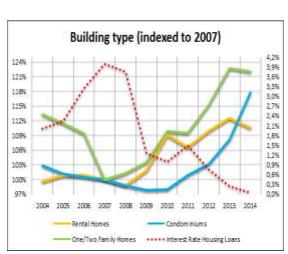

- Location is strongly correlated with the development of interest rates over the last ten years
- Factors converge towards each other up to 2007
- Hierarchy in demand:
 - Buyers prefer the more attractive locations until the price level becomes too high
 - Only then demand for housing in slightly less attractive locations rises

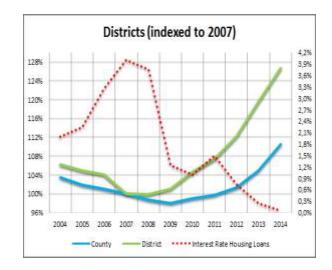

Technology Date: 11.12.2019 Speaker: Dr. C. D. Kim Slide: 11 TH Köln

Motivation Research Goal Evaluation Conclusion/Outlook

- Germany has seen a strong rise in prices as well as low interest rates in the last few years.
- The main result is that higher price levels have been spreading from the city centers to less attractive locations.

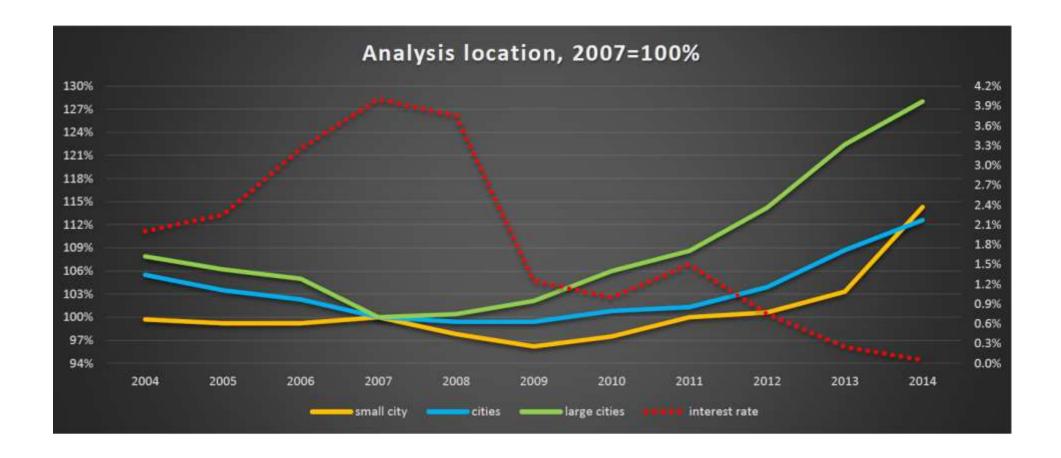

Date: 11.12.2019

Speaker: Dr. C. D. Kim

Motivation Research Goal Evaluation Conclusion/Outlook

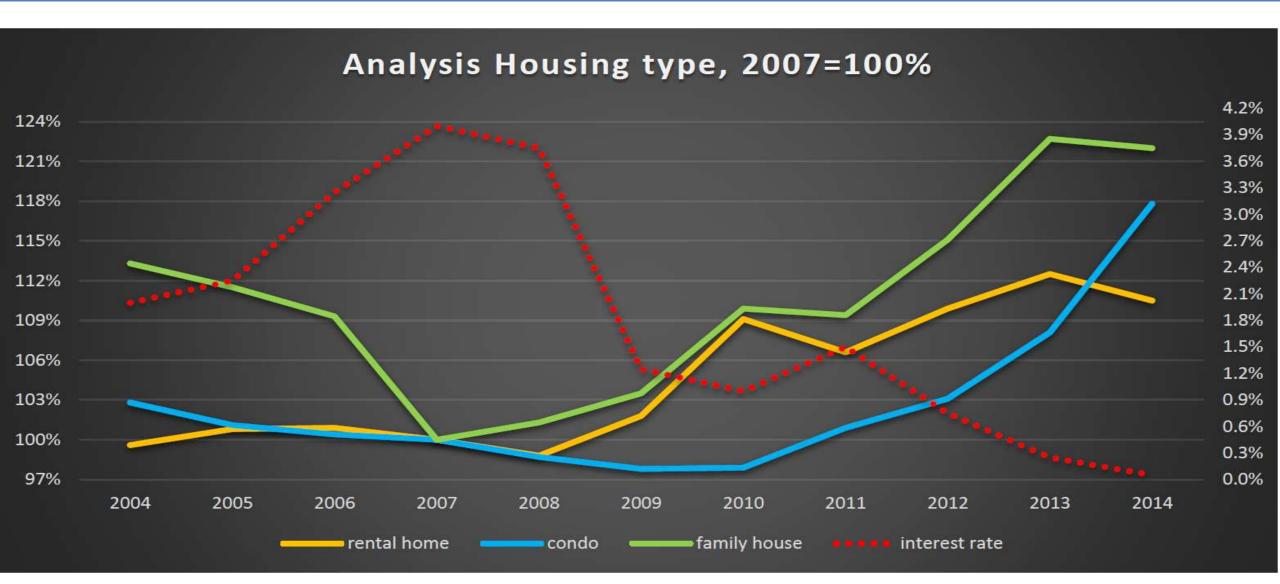

Date: 11.12.2019

3.2 Long-term Housing Type

- Condominiums and rental homes are stable before the crisis, while family homes depreciate in value
- Expected fall in interest rate influenced prices of rental homes and family homes positively, while prices of condos remain until 2010

Date: 11.12.2019

Date: 11.12.2019

Evaluation

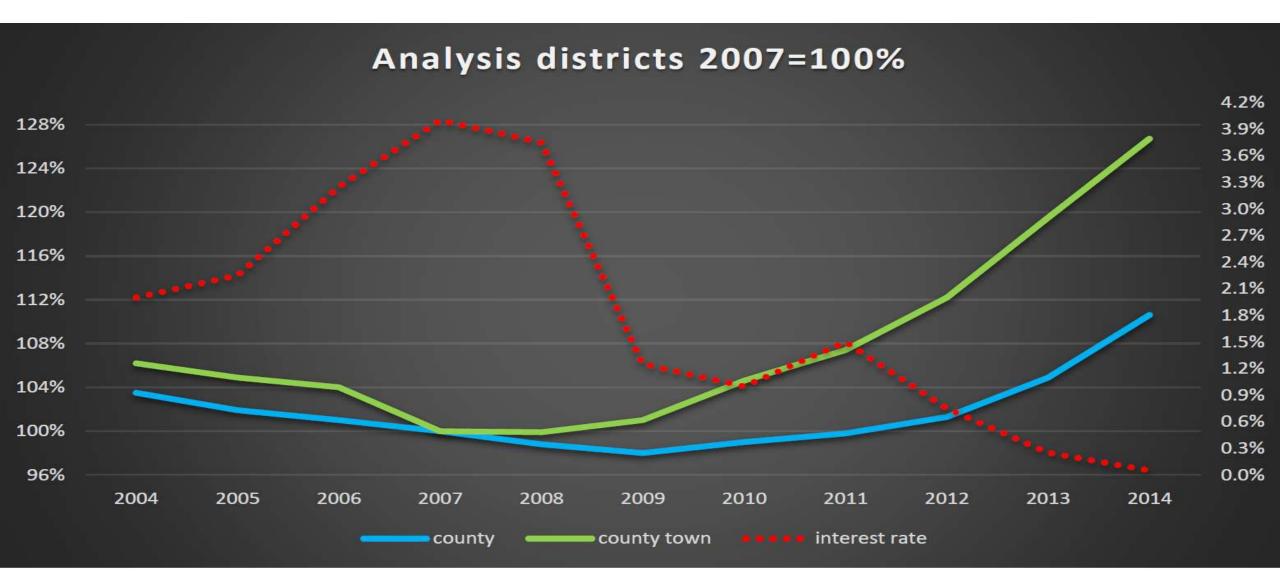

3.3 Long-term Districts and East-West comparison

- Prices in both districts (county and county town) converge with rising interest rate
- As soon as interest rate drops prices diverge

Date: 11.12.2019

Speaker: Dr. C. D. Kim Slide: 16

Date: 11.12.2019

Motivation Research Goal Evaluation Conclusion/Outloo

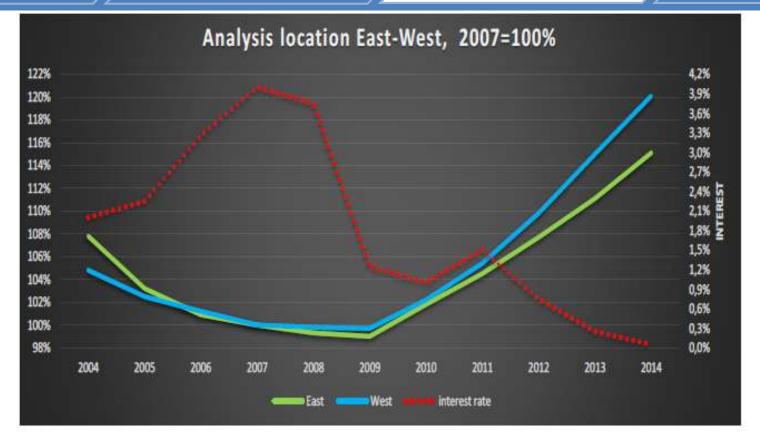

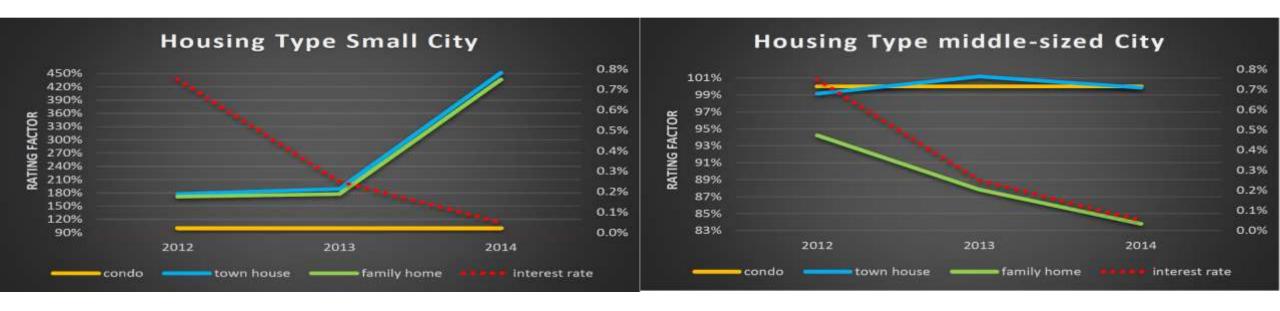

Figure 9: 10 year analysis East-Germany vs. West-Germany

 Prices in east and west Germany are relatively similar until 2010, when demand in the west rises stronger than in the east

Date: 11.12.2019

Motivation Research Goal Evaluation Conclusion/Outloo

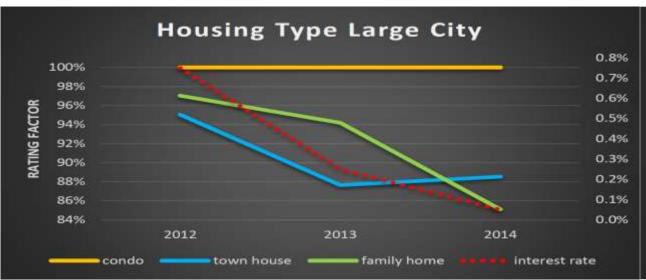

3.4 Short-term Housing Type

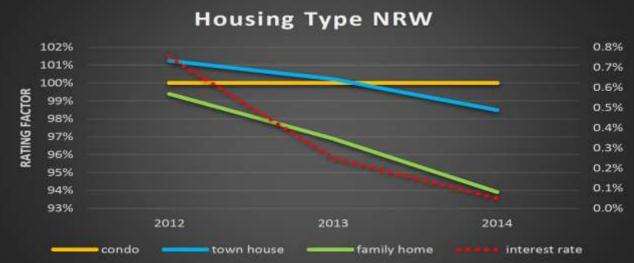

Prices of rental homes, condos and family homes are mainly correlated with location,
 rather than interest rates

Date: 11.12.2019

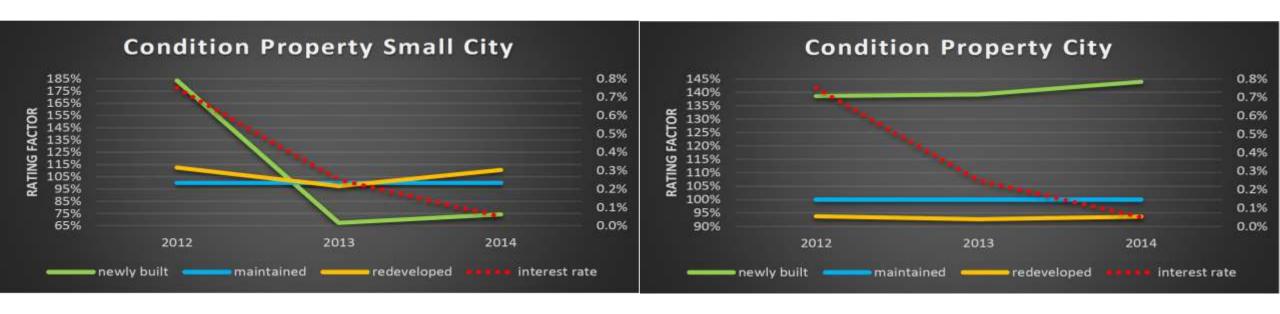

Date: 11.12.2019

Motivation >> Research Goal >> Evaluation >> Conclusion/Outlook

3.5 Condition of the building

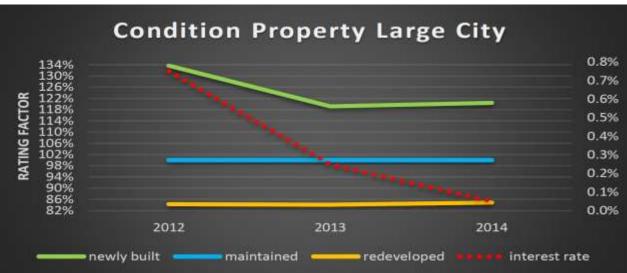

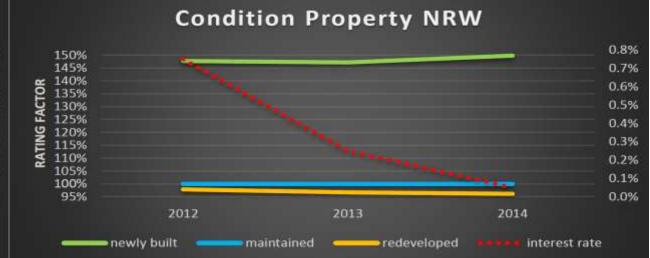

- Condition of the building is a strong influence on the price
- Comparison of newly build, redeveloped and maintained buildings

Date: 11.12.2019 Slide: 21

Speaker: Dr. C. D. Kim

Date: 11.12.2019

Motivation Research Goal Straluation Conclusion/Outlook

4. Results

- The falling interest rate has left its mark on the German housing market
- Large cities:
 - Condominiums show large gains, with the demand for townhouses normalizing since 2013. One and two family homes depreciate in value.
- Middle-sized cities:
 - Townhouses and condominiums are more or less equal. One and two family homes depreciate in value.
- Small cities:
 - Townhouses and one and two family homes have gained substantially.
 Condominiums do not make any major gains.

Date: 11.12.2019 Slide: 23

Motivation Research Goal Strategier Evaluation Conclusion/Outlook

Conclusion/Outlook

- The falling interest rate has strong influence on German housing market.
- All models show the significant correlation between the housing price and the interest rates.
- The extremely good German economy, the still extremely low interest rates and immigration have stimulated the German real estate market positively.
- The Bundesbank calculates that apartments and houses in German cities are overvalued by up to 30%, not only in Germany's seven largest cities, but also in less attractive locations.

Date: 11.12.2019 Slide: 24 Technology Arts Science TH Köln Motivation Research Goal Evaluation Conclusion/Outlook

Conclusion/Outlook

- The extremely low interest rates in the eurozone attracted domestic and foreign investors into the German real estate market.
- Between 2012 and 2016, Germany gained almost three million inhabitants (two million are mainly from southern and eastern Europe).
- The immigration created an additional need for housing, especially in the southern and western German metropolitan areas, which favored the immigrants.
- Do we have a real estate bubble?
